ABOUT ME

Postgraduate student in Computer Science with a strong foundation in programming, software development, and application design. Proficient in C, C++, Python, Java, HTML, and CSS, with knowledge of web development, backend systems, machine learning, and deep learning. Experienced in developing academic projects and user-focused software solutions. Interested in Artificial Intelligence, Deep Learning, Web Technologies, and Software Engineering, with strong analytical, problem-solving, and teamwork skills. Passionate about continuous learning and leveraging technology to create innovative solutions for real-world challenges.

EDUCATION

2024 - 2026

College of Engineering
Trivandrum (CET),
Kerala

M.Tech in Computer Science and Engineering

Pursuing M.Tech in Computer Science at the College of Engineering Trivandrum (CET), Kerala, with a current CGPA of 8.11, focusing on advanced software development, web technologies, and intelligent computing systems.

2019 - 2023

Government
Engineering College
Wayanad, Kerala

B.Tech in Computer Science and Engineering

Completed B.Tech in Computer Science with a CGPA of 6.78, building a strong foundation in programming, software development, and core computer science concepts.

PROJECTS

Sign Language Sentence Formation System with Voice Output

Developed an NLP-based assistive application designed to support communication for deaf individuals. The system allows users to select sign language words which are automatically combined to form meaningful sentences. The generated sentences are then converted into audio using voice output, helping users communicate effectively with people who do not understand sign language.

Service-Based Mobile Application

Developed a mobile application that provides users with access to various household and professional services such as repair, plumbing, and consultation. The application allows users to browse services, make service requests, and manage bookings through a user-friendly interface, improving accessibility to essential services.

Research Paper Repository Website

Designed and developed a web-based research paper repository system that allows users to upload, organize, and search research papers efficiently. The system helps in structured storage and easy retrieval of academic papers while providing a simple and user-friendly interface for managing research resources.

XAI Enabled Ensemble Deep Learning Model for Predicting Postpartum Depression

Developed an AI-based web application to predict postpartum depression using deep learning models and provide interpretable predictions through Explainable AI techniques. The system analyzes patient data, predicts depression risk, and explains model decisions using SHAP and LIME visualizations.

SKILLS

- HTML and CSS
- C Programming
- React
- Deep Learning
- Frontend & Backend Web Development
- Python
- Node.js
- Explainable Artificial Intelligence (XAI)

EXPERIENCE

TechSail Engineering & Compliance Pvt. Ltd., Kerala | 2025

Completed an internship at Techsail, where I worked on developing a service-based mobile application that allows users to access and book various services such as repair, plumbing, and consultation. During the internship, I was involved in designing and implementing application features, which helped me gain practical experience in application development, problem solving, and working on real-world software solutions.
